20 **1 Introduction**

21 **1.1 About this document**

22 This document provides a template based on the [quarto system](#) for contributions to **Computo**
23 Computo Team (2021). We show how Python (Perez, Granger, and Hunter 2011) or R (R Core Team
24 2020) code can be included.

25 **1.2 Advice for writing your manuscript**

26 First make sure that you are able to build your manuscript as a regular notebook on your system.

27 **2 Formatting**

28 This section covers basic formatting guidelines. [Quarto](#) is a versatile formatting system for authoring
29 HTML based on markdown, integrating LaTeX and various code block interpreted either via Jupyter
30 or Knitr (and thus deal with Python, R and many other langages). It relies on the [Pandoc Markdown](#)
31 markup language.

32 To render/compile a document, run `quarto render`. A document will be generated that includes
33 both content as well as the output of any embedded code chunks within the document:

```
quarto render content.qmd # will render to html
```

34 **2.1 Basic markdown formatting**

35 **Bold text or *italic***

- 36 • This is a list
37 • With more elements
38 • It isn't numbered.

39 But we can also do a numbered list

- 40 1. This is my first item
41 2. This is my second item
42 3. This is my third item

43 **2.2 Mathematics**

44 **2.2.1 Mathematical formulae**

45 LaTeX code is natively supported², which makes it possible to use mathematical formulae:

46 will render

$$f(x_1, \dots, x_n; \mu, \sigma^2) = \frac{1}{\sigma\sqrt{2\pi}} \exp\left(-\frac{1}{2\sigma^2} \sum_{i=1}^n (x_i - \mu)^2\right)$$

47 It is also possible to cross-reference an equation, see Equation 1:

²We use [katex](#) for this purpose.

$$\begin{aligned}
D_{x_N} &= \frac{1}{2} \begin{bmatrix} x_L^\top & x_N^\top \end{bmatrix} \begin{bmatrix} L_L & B \\ B^\top & L_N \end{bmatrix} \begin{bmatrix} x_L \\ x_N \end{bmatrix} \\
&= \frac{1}{2}(x_L^\top L_L x_L + 2x_N^\top B^\top x_L + x_N^\top L_N x_N),
\end{aligned} \tag{1}$$

48 **2.2.2 Theorems and other amsthem-like environments**

49 Quarto includes a nice support for theorems, with predefined prefix labels for theorems, lemmas,
50 proposition, etc. see [this page](#). Here is a simple example:

51 **Theorem 2.1** (Strong law of large numbers). *The sample average converges almost surely to the
52 expected value:*

$$\bar{X}_n \xrightarrow{a.s.} \mu \quad \text{when } n \rightarrow \infty.$$

53 See Theorem 2.1.

54 **2.3 Code**

55 Quarto uses either Jupyter or knitr to render code chunks. This can be triggered in the yaml header,
56 e.g., for Jupyter (should be installed on your computer) use

```
---
title: "My Document"
author: "Jane Doe"
jupyter: python3
---
```

57 For knitr (R + knitr must be installed on your computer)

```
---
title: "My Document"
author: "Jane Doe"
---
```

58 You can use Jupyter for Python code and more. And R + KnitR for if you want to mix R with Python
59 (via the package reticulate Ushey, Allaire, and Tang (2020)).

60 **2.3.1 R**

61 R code (R Core Team 2020) chunks may be embedded as follows:

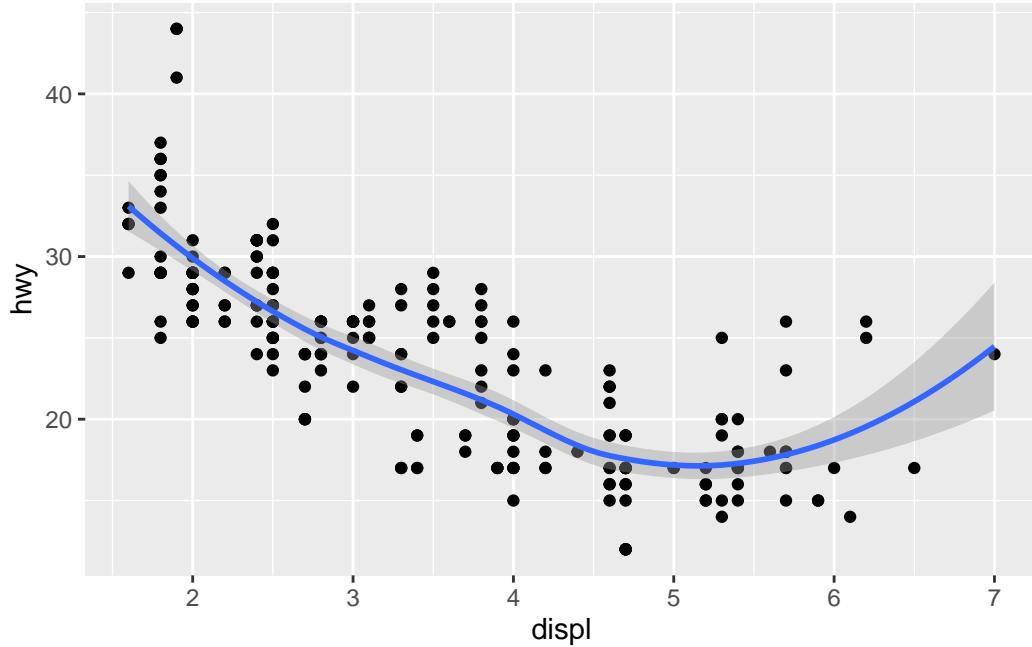

```
x <- rnorm(10)
```

62 **2.3.2 Python**

```
---
title: "My Document"
author: "Jane Doe"
jupyter: python3
---
```

⁶³ **2.4 Figures**

⁶⁴ Plots can be generated as follows:

⁶⁵

⁶⁶ It is also possible to create figures from static images:

Figure 1: SFdS logo (c.a. 2021)

⁶⁷ **2.5 Tables**

⁶⁸ Tables (with label: @tbl-mylabel renders Table 1) can be generated with markdown as follows

Table 1: my table caption

Tables	Are	Cool
col 1 is	left-aligned	\$1600
col 2 is	centered	\$12
col 3 is	right-aligned	\$1

⁶⁹ Table can also be generated by some code, for instance with knitr here:

Table 2: Table caption.

speed	dist
Min. : 4.0	Min. : 2.00
1st Qu.:12.0	1st Qu.: 26.00
Median :15.0	Median : 36.00
Mean :15.4	Mean : 42.98

speed	dist
3rd Qu.:19.0	3rd Qu.: 56.00
Max. :25.0	Max. :120.00

70 2.6 Handling references

71 2.6.1 Bibliographic references

72 References are displayed as footnotes using BibTeX, e.g. [@computo] will be displayed as (Computo
 73 Team 2021), where computo is the bibtex key for this specific entry. The bibliographic informa-
 74 tion is automatically retrieved from the .bib file specified in the header of this document (here:
 75 `references.bib`).

76 2.6.2 Other cross-references

77 As already (partially) seen, Quarto includes a mechanism similar to the bibliographic references for
 78 sections, equations, theorems, figures, lists, etc. Have a look at [this page](#).

 For more information

[Check our mock version of the t-SNE paper](#) for a full and advanced example using the Jupyter kernel.

[The template available in the Computo Quarto extension](#) uses advanced features and the Knitr kernel (interactive plots and pseudocode).
